

## 7.0" microLCD

7.0" DIABLO16 Intelligent Display Module

uLCD-70DT

# MESSAGE FROM THE CEO

---

To our valued customers,

Thank you for your interest in 4D Systems and the products we have to offer.

We are constantly looking for ways to improve our customer experience and it is hoped that a Product Brief such as this, can instil confidence in choosing 4D Systems as your supplier of superior embedded electronic products.

We invite you to showcase our latest release and thank you again for your continued support.

---

Atilla Aknar  
Founder & CEO

# 1. Overview

The uLCD-70DT is a brilliant 7.0" Intelligent Display Module powered by the 4D Systems' **DIABLO16** Graphics Processor.

The uLCD-70DT is designed for applications demanding a large intelligent display module, and is the largest size available from 4D Systems to date.

Driving the display and peripherals is the **DIABLO16** processor, a very capable and powerful chip which enables stand-alone functionality, programmed using the 4D Systems Workshop 4 IDE Software. The Workshop IDE enables graphic solutions to be constructed rapidly and with ease due to its design being solely for 4D's graphics processors.

The **DIABLO16** Processor offers considerable FLASH and RAM upgrades over the PICASO processor, and also provides mappable functions such as I2C, SPI, Serial, PWM, Pulse Out, and Quadrature Input, to various GPIO, and also provide up to 4 Analog Input channels.

# 2. Module Features

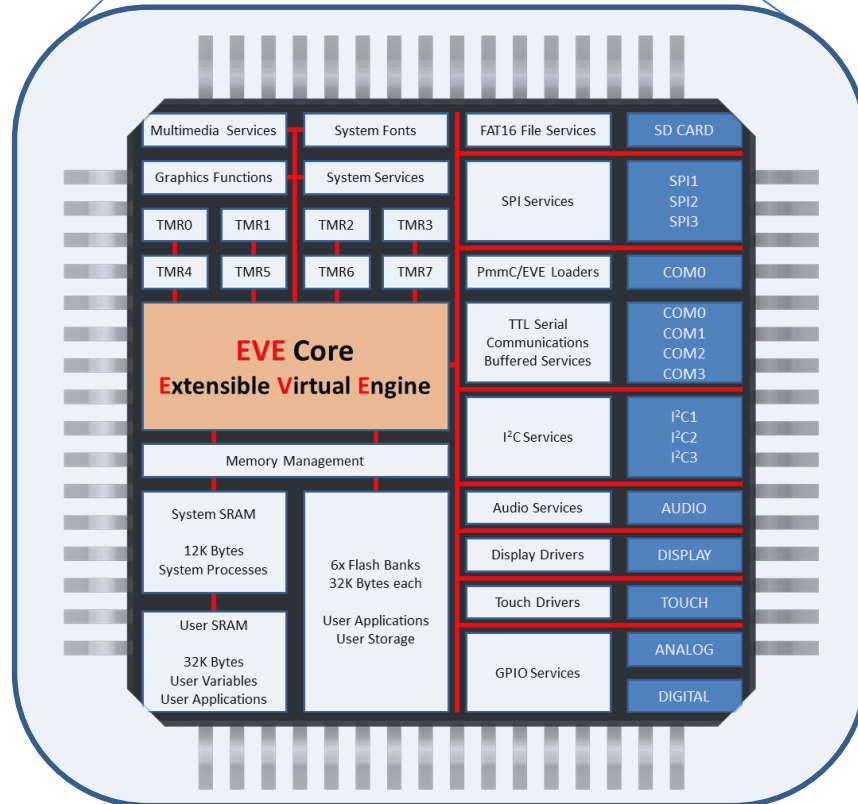

- 01 7.0" TFT LCD Touch Screen
- 02 800x480 Resolution with 65K True to Life Colours
- 03 DIABLO16 Graphics Processor
- 04 5 Pin Serial Programming Interface
- 05 30 Pin Header for Expansion of GPIO and other signals
- 06 micro-SD Card Slot
- 07 SD Card Socket available on special order
- 08 External SD Card Socket available on special order
- 09 5V Input, Barrel Jack, 2.35mm OD 0.7mm ID Socket
- 10 DOS compatible file access (FAT16)
- 11 1 Dedicated and up to 3 mappable TTL Serial ports
- 12 Up to 3 mappable I2C Channels
- 13 Up to 3 mappable SPI Channels
- 14 Dedicated SPI Bus for uSD Storage
- 15 16 General Purpose IO with mappable features
- 16 PWM Audio with on-board Amplifier and Speaker
- 17 8 x 16 bit timers with 1ms resolution
- 18 4 x Mounting Holes with 3.5mm holes
- 19 Light Weight at only ~ 215gm

# 3. DIABLO16 Processor

The **DIABLO16** is a custom embedded graphics Processor designed to interface with many popular OLED and LCD display panels. Powerful graphics, text, image, animation and countless more features are built right inside the chip. It offers a simple plug-n-play interface to many 16bit 80-Series colour LCD and OLED displays.

The **DIABLO16** processor offers a comprehensive set of I/O features and can interface to SPI, I2C, serial, digital, and analog devices, and provides a wealth of features such as PWM, Quadrature, PulseOut and Pin Counter functions. Provision is also made for a dedicated PWM audio output that supports audio WAV files and complex sound generation.

## 4. 7.0" TFT LCD Display

The **μLCD-70DT** has a **7.0"** TFT LCD display at the forefront of the design that showcases the power and capabilities of the DIABLO16 processor. Combining a resolution of **800x480** pixels with **65K** True to Life colours, the **μLCD-70DT** delivers crisp colour perfect for animations, slideshows and a number of multimedia presentations.

# 5. micro-SD Card Socket

The  $\mu$ LCD-70DT supports **micro-SD** memory cards via the on-board micro-SD connector. This provides the user with expandable memory space suitable for all multimedia file retrieval, such as images, animations and video clips, as well as data logging applications.

Supports up to 2GB micro-SD as well as micro-SDHC memory cards starting from 4GB and above.

Pictured to the right shows a full sized SD memory card socket. This is not normally populated on the PCB, however can be on special request from the customer. Please contact sales for more information.

# 6. Audio

Audio playback support in the DIABLO16 Processor enables the  $\mu$ LCD-70DT module to play audio WAV files stored in the micro-SD memory card.

The  $\mu$ LCD-70DT module features an on board Audio Amplifier which is fed from a filtered PWM signal from the **DIABLO16** Processor, allowing audio playback.

A simple instruction enables the user to play/pause/stop audio files while continuing the execution of the users code, such as display updates, touch recognition, communications, etc. The audio system also allows real time pitch change of audio samples.

# 7. Powering Your Device

Powering the  $\mu$ LCD-70DT is as simple as connecting to a PC via a 4D Programming Cable or uUSB-PA5 Programming Adaptor.

Power can also be supplied by a regulated 5V DC source into one of the 5V pins present on the headers, or the DC Barrel Jack (Featured on later revision PCB's only)

# 8. What You Need

## Essential items

4D Programming Cable or  
4D Programming Adaptor

Windows Based PC

4D Workshop4 IDE Software Tool

## Optional Items

micro-SD Card & SD Adaptor

**Note:** If using ViSi-Genie or ViSi Environments  
Then a micro-SD card is an Essential Item.

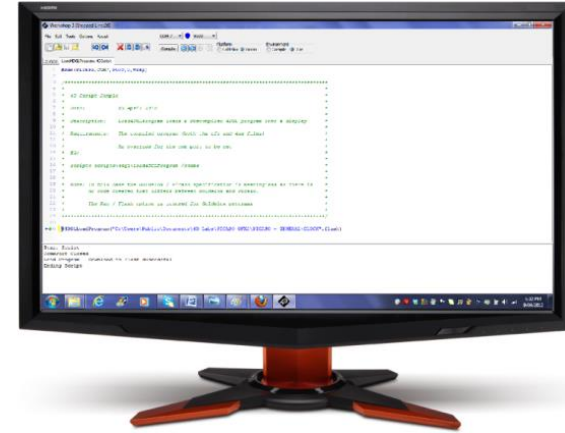

# 9. Getting Started

4D Programming Adaptor

4D Programming Cable

Getting started with a **DIABLO16** Display Module is as simple as connecting the 4D Programming Cable or adaptor to the Display Module, and choosing your Product and Development Environment in the 4D Workshop4 IDE.

**4D Workshop4 IDE** guides you through the relevant Aid Tools to get your Application up and running in no time.

# 10. Development Environment

**Workshop4** is a comprehensive software IDE tool suite that provides an integrated software development platform for all of the 4D family of processors and modules. The Workshop4 IDE supports four different **Development Environments** for the user using a DIABLO16, to cater for different requirements and skill level.

**Designer:** The Designer environment enables the user to write 4DGL code in its natural form to program the  $\mu$ LCD-35DT.

**ViSi:** A visual programming experience, suitably called ViSi, enables drag-and-drop type placement of objects to assist with 4DGL code generation and allows the user to visualise how the display will look while being developed.

**ViSi-Genie:** An advanced environment called ViSi-Genie doesn't require any 4DGL coding at all, it is all done automatically for you. Simply lay the display out with the objects you want, set the events to drive them and the code is written for you automatically. ViSi-Genie provides the latest rapid development experience from 4D Systems.

**Serial:** A Serial environment is also provided to transform the  $\mu$ LCD-70DT into a slave serial module, allowing the user to control the display from any host microcontroller or device with a serial port.

# 11. Display Modules in DIABLO16 Range

4D Systems offers two different display modules in the microLCD range, and an OEM Development Module, driven by the **DIABLO16** Processor. Details on individual modules could be found from their Product Brief, Datasheet or from the 4D Systems website.

## Proprietary Information

The information contained in this document is the property of 4D Systems Pty. Ltd. and may be the subject of patents pending or granted, and must not be copied or disclosed without prior written permission.

4D Systems endeavours to ensure that the information in this document is correct and fairly stated but does not accept liability for any error or omission. The development of 4D Systems products and services is continuous and published information may not be up to date. It is important to check the current position with 4D Systems. 4D Systems reserves the right to modify, update or make changes to Specifications or written material without prior notice at any time.

All trademarks belong to their respective owners and are recognised and acknowledged.

## Disclaimer of Warranties & Limitation of Liability

4D Systems makes no warranty, either express or implied with respect to any product, and specifically disclaims all other warranties, including, without limitation, warranties for merchantability, non-infringement and fitness for any particular purpose. Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications.

In no event shall 4D Systems be liable to the buyer or to any third party for any indirect, incidental, special, consequential, punitive or exemplary damages (including without limitation lost profits, lost savings, or loss of business opportunity) arising out of or relating to any product or service provided or to be provided by 4D Systems, or the use or inability to use the same, even if 4D Systems has been advised of the possibility of such damages.

4D Systems products are not fault tolerant nor designed, manufactured or intended for use or resale as on line control equipment in hazardous environments requiring fail – safe performance, such as in the operation of nuclear facilities, aircraft navigation or communication systems, air traffic control, direct life support machines or weapons systems in which the failure of the product could lead directly to death, personal injury or severe physical or environmental damage ('High Risk Activities').

4D Systems and its suppliers specifically disclaim any expressed or implied warranty of fitness for High Risk Activities.

Use of 4D Systems' products and devices in 'High Risk Activities' and in any other application is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless 4D Systems from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any 4D Systems intellectual property rights.
